In July 2024 the End User Charge will be going up to $49.52

Milford Municipal Utilities
Serving Since 1909

In December of 2021, the MMU Board of Trustees approved to engage the services of Bolton & Menk to evaluate the water supply and treatment facilities and provide recommendations for future improvements. Bolton & Menk provided a Preliminary Engineering Report for the purpose of providing the necessary information for the review of the current and potential future drinking water standards and to ensure that standards are met and continue to be met. Overall, the report will provide a roadmap of how MMU has provided safe drinking water to its customers and how it can continue to do so in the future.

OUR WATER, OUR FUTURE.

Our current treatment facility, built in 1979, has reached the end of its useful life.

The new water facility will have the capacity to serve our growing community with safe and reliable water.
